Profile Summary

Senior Software Developer with a Master of Computer Science degree, expert in JavaScript frameworks, particularly in crafting high-performance and scalable applications for e-commerce and SaaS platforms. Curious by nature, and interested in all emerging technologies related to software development.

Professional Skill

- React - NextJS - Redux - Zustand - Tailwind - Linaria - GraphQL - Typescript - SEO - Optimizations
- NodeJS - Apollo - Fastify - ORM - BullMQ - PostgreSQL - MongoDB - Docker - Cloud computing
- Pro-efficiency - Leadership - Resilience - Adaptability - Teamwork - Agile methodology

Work Experience

REVERSED DIGITAL - Senior Fullstack Developer

September 2022 - Current

- Gassan, Xpozer: (e-commerce clients)
 - Create and improve websites following design from Figma, using various CMS, GraphQL, SEO best practices and Google analytics.
 - Developed a robust backend which facilitated integration with third-party payment gateways, also orchestrating synchronisation of critical data across various platforms for enhanced operations.
- Frank Energy:
 - Adapted existing frontend codebase to accommodate country-specific variations, enabling seamless user registration for new clients from different countries.
 - Played a pivotal role in a code optimisation drive, leveraging cache to streamline backend operations, while unifying diverse endpoints with country-specific services for enhanced efficiency.

DOW JONES - Senior Frontend Developer

May 2021 - September 2022

- Instituted business-specific packages to centralize code, slashing bugs and shrinking app size across diverse applications.
- Successfully migrated legacy applications to Next.js, resulting in significant improvements in performance and maintainability.
- Volunteered to contribute to API governance, ensuring consistency across our API ecosystem.

TAPPX - Fullstack Developer

May 2020 - January 2021

- Led backend development of a microservice using Laravel for PDF generation, which resulted in smooth integration and efficient data processing.
- Led the migration of a legacy website to Next.js, integrating a CMS for streamlined data management.
- Enhanced the business dashboard to provide comprehensive tracking of activities, improving visibility and facilitating a deeper understanding of generated revenue.

EPITECH - Lead Professor of Software Development for MSc program

March 2017 - March 2020

- Created a curriculum for software engineering and taught a diverse range of programming languages, including Java, C, .NET, and C++ for Masters students. I also oversaw a team of teacher assistants within the Masters program.

Interests

- Security
